```java
1  package FahrenheitToCentigrade;
2  import java.util.*;
3
4  public class Convert {
5
6      public static void main(String args[])
7      {
8          float radian;
9          double degree;
10
11         Scanner sc = new Scanner(System.in);
12
13         System.out.println("Please insert value in Fahrenheit: ");
14         radian = sc.nextFloat();
15
16         degree = (radian-32)/1.8;
17
18         System.out.println("Celcius equivalent of: " + radian + " Radian is " + degree + "
   Degree");
19     }
20
21 }
22
```
